

### Flutter Side/UI:

- Organization dropdown on ProfilePage.dart must be implemented to react with the server
- Create Account in login.dart needs to be updated to work with server alongside its related pages. (Might be best to wait for authentication to begin work).
- Sign in in login.dart always signs in same user from server no matter login credentials. Needs updated with authentication later and to get user using login credentials.
- EventsList.dart currently does not show details due to outdated methods attempting to pull information that is no longer on the server databases.
- ReportHoursPage.dart Currently broken. For some reason when retrieving reports from cubit some of the fields are being initialized to null, even though they appear to be correctly initialized when the report cubit is started. Need to fix this issue for functionality.
- We did not spend too much time working with relationship tables – if progress was made on database relationship tables, pay attention to json methods in repository.dart and edit accordingly.
- A list of ints to represent users registered for a future event would be helpful for Jen
- It is very important for you to meet with Jen after you understand the current state of the app to clarify what she wants/expects from the app as well as what tools and information she currently uses.

### Notes From Jennifer Liedtka

These notes came from a meeting with Jen about the app, once you have an understanding of the workings of the app you should definitely also set up a meeting with Jen to better understand these points and what she is looking for

- “Events” on the flutter side are known as “Projects” on the database
- “Organizations” on the flutter side are known as “Groups” on the database
  - o Users can only join groups marked as ‘campus’
    - Users should be able to join multiple organizations, when reporting hours, these hours should be attributed to all organizations user is a part of
  - o Groups marked with ‘community’ are only for representing events – users can not join these
- Both Events and Organizations should be made by Jen, not users
  - o Might be useful to add an admin view of the app so Jen can make these here
- “project name” is unusable - there should be broad categories
  - o Stuff like environmental cleanup, tutoring, etc.
  - o Make an other category for if there are no fitting names
